

NICOLAS ESGEB REYES

AI-Native Software Engineer | Python · C# · Swift · LLM & API Integrations

nico.esg.rey@gmail.com | +44 7782 138497 | London, UK | github.com/NicoEsgeb | nicoesgeb.github.io | linkedin.com/in/nicoesgeb
UK Graduate visa holder - full right to work in the UK; no sponsorship required currently

PROFILE

MSc Computer Science graduate and early-career software engineer with experience shipping production automation, conversational AI and full-stack applications. At IBM, integrated watsonx.ai/IBM Granite and speech services through REST APIs; at ViData, develop and support a Python platform that orchestrates business-critical automation workflows. Use AI coding assistants across implementation, debugging, testing and documentation while retaining engineering ownership through code review, reproducible validation and production monitoring.

TECHNICAL SKILLS

AI-native engineering: AI-assisted coding, debugging, test generation and code review; prompt engineering; AI output evaluation; LLM/API integration; context and latency optimisation; agentic workflow concepts

Software engineering: Python, FastAPI, REST/JSON APIs, SQL, SQLite/SQLModel, C# (Unity), Swift, JavaScript/TypeScript, Java, HTML/CSS; React fundamentals

Platforms & delivery: Firebase Auth/Firestore/Cloud Functions, PySide6/QML, SwiftUI, Git/GitHub, Azure, unit testing, Agile/Scrum, structured logging, Jira, Confluence, architecture documentation

AI tools: Claude Code, Cursor, OpenAI Codex, watsonx.ai, Watson Assistant, IBM Granite, Speech-to-Text, Text-to-Speech

PROFESSIONAL EXPERIENCE

ViData.cl - Software Associate, Automation Platform

Dec 2025 - Present

Remote

- Develop and maintain a production Python automation platform using PySide6/QML, FastAPI and SQLModel/SQLite to run, monitor and manage multiple bots, execution logs and run history.
- Own workflow changes from requirement through production support: investigate structured logs, reproduce failures, distinguish code defects from external-service issues, implement fixes and validate successful reruns.
- Built document-generation, tribunal-lookup, data-extraction and case-processing integrations, reducing one legal workflow from up to 3 days to approximately 1 hour.
- Apply AI-assisted engineering to implementation, debugging and documentation, reviewing generated output against project constraints and real execution evidence before deployment.

Outlier - AI Data Annotator & Senior Reviewer

Sep 2025 - Dec 2025

Remote

- Used structured prompts to generate and refine React interfaces; evaluated AI-produced code against detailed functional and visual requirements and provided precise corrective feedback as a senior reviewer.

IBM - Project Intern, University Summer Project

May 2025 - Sep 2025

Bristol, UK

- Built a client-demoed conversational-AI application in Unity/C#, integrating Watson Assistant, watsonx.ai/IBM Granite, Speech-to-Text and Text-to-Speech through REST/JSON APIs.
- Designed a prompt-construction pipeline combining persona, behavioural rules and conversation context for each generative request, improving response consistency across distinct NPCs.
- Improved average response latency by about 30% using request batching and lightweight caching; secured credentials through environment-based configuration and documented the architecture for client handover.

GEODATOS S.A.I.C. - Geophysical Data Processing Engineer

2021 - 2022

Santiago, Chile

- Processed and quality-controlled complex field datasets using repeatable workflows and produced technical client reports covering methodology, interpretation, maps and recommendations.

SELECTED PROJECT

NanaiNest - Full-Stack Focus & Card-Collection App

Mar 2026 - Present

Swift/SwiftUI · Firebase · nanainest.com

- Built and shipped a shared-codebase macOS/iOS application, integrating Firebase Auth, Firestore, Cloud Functions, cloud sync, referral rewards and StoreKit 2 purchases; owned delivery from product design through App Store release.

EDUCATION

University of Bristol - MSc Computer Science

2024 - 2025

Pontifical Catholic University of Valparaiso - Licentiate in Engineering Sciences; further Civil Mining

2015 - 2021

Engineering studies

Languages: Spanish (native) | English (C1, IELTS 8.0)
